MINES PROSPECTS UTAH'S GREATEST MINING PROSPECTORS FINDUSTRY

Butler-Liberal and Lower Trading Was Very Light and With-Mammeth Companies.

MANAGER JACOBS'S REPORT

Simon Bamberger to Be Pres-Ident of Lower Mammoth.

James Chipman and Solon Spiro Retire From the Board of Directors.

The stockholders of the Butler-Liberal Consolidated Mining company held their first meeting since the consolidation of the Ben Butler and Chicago and Bingham mining companies, yesterday. The election of the directors resulted in no material changes, the board consisting of A. L. Jacobs, C. N. Strevell, M. J. Friedman, L. U. Colbath, Joseph Geoghegan, W. H. Cunningham

Mr. Jacobs was afterward elected president and general manager; Mr. Strevell, vice-president; M. J. Friedman, treasurer, and W. P. Lynn, secretary. The following report on the physical condition of the mines was presented by Manager Jacobs:

The present management took charge of the consolidated company's affairs without any money in the treasury, and, while a fair amount of ore was in sight, the ore bodies had to opened up by drifts, crosscuts and raises in order to handle the same as economically as possible, taking into consideration the very flat vein wideh carries the mineral.

The total production of ore from July 1, 1993, to January 1, 1993, amounted to 1874 tons of dry first-class ore and 1867 tons of wet second-class ore. The first-class ore netted \$29,237,24, or an average of \$6,08 per ton, while the second-class or milling ore netted \$953,63, or an average of \$6,08 per ton, making a grand total of net receipts for ore marketed during six months amounting to \$38,830,92.

In explanation it is necessary to state that the above figures are net, after deducting all expenses, such as hauling milling freight and smelting charges and also sampling and assoxying.

There is at present about 50 tons of

ducting all expenses, such as hauling milling freight and smelting charges and also sampling and assaying.

There is at present about 80 tons of first-class ore at the sampler to be settled for and about 175 tons of second-class or milling ore in the bin.

The Liberal ground was prospected by 251 feet of drifting through the Butler tunnel, opening up the bedded vein in that claim, which a former management felled to accomplish through the Liberal tunnel, having followed a fissure vein. A raise of sixty-five feet was also driven to tap the ere body above.

The east or main drift in Ben Butler ground proper was extended 100 feet and a crosscut of 100 feet was run from there to intercept the bedded vein. This work was done by contract.

No, 2 raise was extended forty feet, Other drifting, amounting to 470 feet, was done in different parts of the mine.

In order to open up the ore bodies below our present workings, the board of directors decided to start a new tunnel at a lower elevation, but to accomplish this, it was deemed expedient to acquire the Fourth of March claim, which was purchased for \$450. That new tunnel will drain all our present drifts and give us a great deal of stoping ground, exposing large bodice of copper sulphides, which are known to exist in that country at depth.

This is considered by competent and ex-

depth.

This is considered by competent and experienced mining engineers to be the cheapest and most effective pian to prospect our veins below the water level. The cre-bearing bedded vein, being very flat, could not be advantageously prospected by a vertical shaft, the hoisting of waste and ores, as well as the pumping of water, costing more than the low-grade sulphide ores of Bingham camp would warores of Bingham camp would war-

The financial statement shows the net receipts during the past six months from the sale of ore and royalties to be \$39,043.31. The disbursements, including \$4512 for the purchase of ground and a \$2500 dividend, amounted to \$14.-781.06, and the cash on hand is \$16.941.45.

LOWER MAMMOTH MEETING.

Simon Bamberger Is Again at the Helm.

Simon Eamberger again appears on the directorate of the Lower Mammoth Mining company, and will undoubtedly be made president to succeed James Chipman. At the stockholders' annual meeting vesterday afternoon in the Utah National bank Mr. Chipman, W. 8. Chipman and Solon Spiro were retired from the board, which was made up as follows: Simon Bamberger, W. S. McCornick, A. C. MccMillan, A. C. Ellis, Jr., Elias A. Smith, John Dern

Mr. Bamberger is one of the heaviest stockholders and it was through his votes that the Chipmans were placed on the board. He has now decided to resume personal control of the property. The report of the manager showed a deficit of \$3000 after the payment of the December payroll. The ore in the mine is all right as to quantity, but is of too low grade to handle profitably. The physical condition and equipment of the mine is good and there are forty men

IT IS FOR LADIES, TOO.

They Can Stop Their Hair Falling Out With Herpicide.

dies who have thin hair and whose Ladies who have thin hair and whose bair is failing out, can prevent the hair failing out, and thicken the growth, with Newbro's "Herpicide." Besides, Herpicide is one of the most agreeable hair dressings there is. Herpicide kills the dandruff germ that eats the hair off at the root. After the germ is destroyed, the root will shoot up, and the hair grow long as ever. Even a sample will convince any lady that Newbro's Herpicide an indispensable toilet requisite. It ontains no eil or grease, it will not stain dye. Sold by leading druggists. Send in stamps for sample to The Herpice Co., Detroit, Mich.

employed. The stockholders are in fa-vor of more extensive development and a search for new ore bodies

THE DAY ON 'CHANGE

out Interesting Features.

The brokers on the exchange played to a poor house and small business yesterday. The morning turn was bad, but the afternoon was worse. Altogether 16,010 shares changed hands and the total value of the shares sold was \$3798.25. Con. Mercur was the principal actor, in fact it was the only share which received any attention at all during the regular call in the afternoon. It opened in the morning at 61 cents, sold as low as 58 cents and was tied up for the night at 60 cents, a net loss of 1 cent.

New York was sold short, but in the face of these sales advanced from 10% cents to 11% cents. Altogether only 2000 shares were sold. Carisa lost two points during the day. Two hundred shares of Yankee Con, were snapped up at 40% cents and 100 Naildriver brought 621/2 cents per share. | A. M. || P

> Boston Market Firm. [TRIBUNE SPECIAL.]

Boston Mass., Jan. 11.—The Boston market has been quiet but firm and while trading has been limited, a very strong tone was displayed. The changes recorded are mostly on the upward side. The demand for these shares is gradually increasing and manipulation apparently is for higher prices. Public Interest is still lacking, but is showing a tendency to increase. The weakness in Amsignmated in the afternoon affected prices fractionally closing fairly strong. Hornblower & Weeks, brokers, 53 State street, Boston, and 10 Wall street. New York, furnish the following quotations:

FIRST OIL WELL.

Exact Location of Guffey & Gailey Plant.

It is now definitely determined that the first oil well in Salt Lake valley will be put down by Guffey & Gailey at the southeast corner of section 26, township 3 north, range 1 west. This is southwest of Farmington, in the old gas field, and close to the property of the Lake Shore Gas and Oil company, Work has been started on buildings and the derrick, so the drillers hope to be ready to put up the rig as soon as the last of the machinery arrives.

TALC COMING IN.

Good Indications in Park City Company's Property.

Encouraging reports come from the property of the Park City Gold and Silver Mining company, where a drift is being run under contract toward the contact vein. The drift was started last fall from the bottom of the shaft, and at a depth of 300 feet, and has been driven through the lime formation for a distance of seventy-five feet. In the last few feet the talc seams have been coming in more frequently and gaining in width. In place of one small seam, there are now six or seven streaks of the clay. The tale is usually regarded in the district as an excellent sign of proximity to the contact vein, and the owners of Park City feel good in the same degree as the seams

SALE IS POSTPONED.

Dexter-Tuscarora Stockholders Given More Time.

A bit of pleasing information for delinguent stockholders in the Dexter-Tuscarora Gold Mining company is the announcement by the board of directors that the sale of stock for assessment has been postponed from January 8th to February 8th.

The option on the mine held by an Castern syndicate expires February Eastern lst, and the postponement of the sale of stock has been made in order that the delinquents may have a chance to pay up their assessments in case the option is taken up. If the sale takes place each share will be worth 20 cents, or \$100,000 for the mine; the assessment is only 2 cents, and the de-linquents will therefore find it plainly to their advantage to keep all their stock. It is believed that the purchase will be consummated.

SPECIMENS FROM NEVADA.

Good Copper Prospects in Mt. Granite District.

Some elegant specimens were being displayed along Brokers' row yesterday from the Granite Mountain mining district in Elko county, Nevada. The man who brought them in was Carl Karkstein, manager of a group of claims including the Victoria, White Horse and Bimetallic, owned by Philadelphia capitalists. Mr. Karbstein says that the Victoria

is one of the most promising proposi-tions in the State of Nevada. Although was patented nearly thirty years ago work has been neglected and it is only recently that its possibilities have be-gun to be realized. There is a shaft

on the property eighty-five feet deep and a drift has been run from the bot-tom for 137 feet. The drift is in ore all the way and the hanging wall has never been exposed. How thick the ore will prove to be can only be con-fectured. There is now 100 tons of jectured. There is now 100 tons o pay rock on the dump which will aver

age 10 per cent copper.

The White Horse claim has had practically no development, but there are numerous croppings, and even at the surface, where the ore has been leached by the elements, the average of the assays is about 16 per cent in copper.

The Bimetallic is being developed by a turnel which has been driven 140 feet. The ledge was encountered at thirty feet and is ten feet thick, going down almost vertically.

Mr Karbstein's samples are now in the possession of Secretary Shorten of the Stock exchange, who is showing them to every one who likes good copper specimens.

Ore and Bullion.
